PROFESSIONAL SUMMARY

Software Engineer with 2 years of experience building enterprise web applications across backend, frontend, databases, and applied AI. Experienced in C#, .NET 8, ASP.NET Core, Entity Framework Core, Angular, SQL, Java, and Spring Boot. Hands-on experience building RESTful APIs, distributed services, CI/CD workflows, and AI-powered applications using LLMs, RAG, vector embeddings, and similarity search. Strong understanding of SDLC, clean architecture, Agile/Scrum, testing, and enterprise application development.

EXPERIENCE

Junior Software Engineer

Tietoevry Fintech India Pvt Ltd — Aug 2024 – Jun 2026, Bengaluru, IN

- Designed and implemented scalable backend services using C# and .NET 8, leveraging Entity Framework Core and clean architecture principles to enhance modularity, maintainability, and performance, while integrating Blazor and ASP.NET Core frontends across multiple application modules.
- Contributed across the SDLC, including requirements analysis, design, development, testing, deployment, and production support.
- Developed reporting solutions for wealth management applications in the banking domain, supporting accurate financial insights and business decision-making.
- Developed distributed caching and recovery services to improve application performance, availability, and fault recovery.
- Monitored production systems and managed incidents and problems using ServiceNow, following ITIL practices for incident, change, and release management.
- Leveraged Azure DevOps to manage CI/CD pipelines, source control, code reviews, Agile sprint planning, and release execution, enabling streamlined development workflows and reliable deployment processes across environments.

Software Engineer Apprentice

Tietoevry Fintech India Pvt Ltd — Feb 2024 - May 2024, Bengaluru, IN

- Designed and developed backend modules using Java, Spring Boot, and RESTful APIs for scalable, high-availability services. Optimised data persistence using JPA/Hibernate and SQL, improving database query performance and application responsiveness.
- Developed unit and integration tests using JUnit and Mockito, improving API reliability and reducing production defects.
- Collaborated in an Agile/Scrum environment using Git and code reviews to improve code quality and maintainability.

PROJECT

AI-Powered IT Incident Triage System

Tech Stack: ASP.NET Core (.NET 10), EF Core, SQL Server, Angular, Python, FastAPI, Gemini API

- Built an IT incident management system inspired by ServiceNow workflows, supporting ticket creation, AI-powered triage, ticket handling, agent comments, and resolution tracking.
- Built a RAG-based classification pipeline using Python, FastAPI, vector embeddings, and cosine similarity to retrieve relevant historical incidents and ground LLM predictions for category, ITIL severity (P1–P4), routing team, and incident summary.
- Designed the AI service with a swappable provider architecture, allowing the underlying LLM to be changed without modifying calling code.
- Implemented JWT-based authentication with role-based access control (Requester/Agent roles) using ASP.NET Core Identity.
- Built a signal-based Angular frontend with dropdown-driven inline editing validated against server-defined option sets, threaded comments, and a persistent resolution-capture workflow

EDUCATION

Bachelor of Engineering in Computer Science

Visvesvaraya Technological University • 2020-2024 — CGPA: 9.31

SKILLS

Programming Languages: C#, Java, Python, TypeScript, JavaScript, SQL.

Frameworks & Technologies: .NET, ASP.NET Core, Spring Boot, FastAPI, REST APIs, React JS, Angular, Entity Framework (EF) Core.

AI/ML: RAG, LLM, Vector Embeddings, Generative AI (GenAI).

Database: MySQL, SQL Server, PostgreSQL.

Testing & Software Engineering: Unit Testing, SDLC, Agile/Scrum, OOP.

DevOps & Tooling: Microsoft Azure, Git, Docker, CI/CD, Jira, TFS, Postman, Swagger, ServiceNow.
